

IMAGEWARE® SYSTEMS

GoVerifyID®

IMAGEWARE'S MOBILE BIOMETRIC USER AUTHENTICATION SOFTWARE-AS-A-SERVICE

You become the password.

Secure, scalable and flexible.

GoVerifyID provides end-to-end, enterprise-ready, mobile biometric user authentication.

For the enterprise, GoVerifyID is an ultra-scalable, multi-modal Software-as-a-Service solution. It's easy to install with no upfront cost and no disruption to your business. You can pay-as-you-go and scale-as-you-need.

To the end user, GoVerifyID is an easy to use app that's downloaded from Apple's App Store or Google's Play Store. Identification is as simple as taking a selfie, speaking a passphrase or swiping a finger.

GoVerifyID requires no additional coding or hardware, includes future upgrades and enhancements, and requires only minimal IT resources.

Secure

Personal, Accurate, Anonymous

Identifies the person, not the device

Multi-layer protection of user's biometric data

Anonymous authentication and storage

Scalable

Speed, Population, Device

Operates at the speed of business (real-time identity verification)

Scales to hundreds of millions of identities and transactions per day

Supports everything from small businesses to entire nations

Flexible

Multi-Biometric, Easy to Deploy and Integrate

Supports single or multiple biometrics

Select your choice of biometric vendors, authentication policies, and workflows

Add users with an Admin portal and other interfaces

Identity proofing verifies user identity before signup:

We're the only biometric user authentication SaaS that incorporates this critical first step.

After identity authentication users can:

Log into Apps and SSO. Access Wi-Fi, VPN, and other networks.

Benefits

- Improves security with biometric Multi-Factor Authentication (MFA)
- No more forgotten passwords or lost RSA tokens
- Simple, intuitive, fast with no disruption to workflow
- Allows organizations to fully harness mobile capabilities
- Application does not store Personal Identifiable Information (PII), so your data is safe
- Quick and easy set-up — no coding required
- ImageWare branded or white labeled with fully open SDK

Features

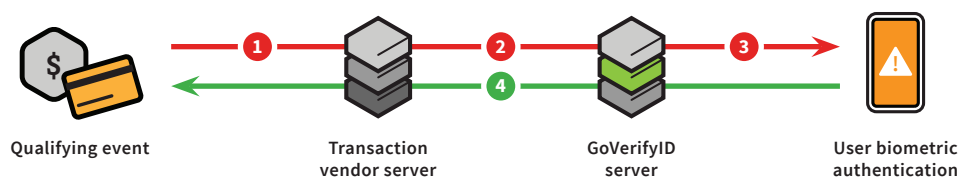

- Highly scalable biometric engine can process hundreds of millions of transactions
- Anonymous cloud storage ensures user privacy and security
- Intelligently combines the matching of multiple biometrics
- Supports all current and future biometric modalities, for in- and out-of-band authentication
- Standard interfaces to SAML, SCIM, and OAuth
- Flexible deployment options
- Available for iOS and Android

Deployment is as easy as 1-2-3

- 1 Users download GoVerifyID from an app store.
- 2 A prompt directs users to enroll with their biometrics (face, voice and/or fingerprint).
- 3 Another prompt directs users to verify their identity with their biometrics. Done.

Mobile Biometric User Authentication: How it Works

- 1 A qualifying event (like a retail transaction at a store) starts the process.
- 2 The transaction vendor server (like a bank) pings the GoVerifyID server for an authentication request.
- 3 The user is asked to submit their biometrics for authentication.
- 4 Based on the results from the servers, the authentication is approved or denied.
